Cleaning Path: 46" | Run Time: Up to 5 Hours | Full Steel Design

The Beta HDTR's design was built from the success of our HD34 walk behind sweeper. The HDTR's side brooms sweep up dirt in the corners while a huge tubular sweeping broom under the machine sweeps up the dirt and debris from the floor and packs it into the steel hopper. Meanwhile, the second stage vacuums up the dust and traps it in a polypropylene felt baghouse filter. Beta's Industrial floor sweepers can pick up whole bags of cement at a time without leaving a trace of dust behind.

Built out of steel, it's not uncommon for a HDTR to last for 10+ years.

Baghouse Filter and Beater Bar provides unmatched particulate collection. Sweepers can pick up whole bags of cement at a time. In most cases the filter will last the lifetime of the machine.

Maintenance is a snap. There's no oil to change, brooms to reverse, fuel to spill, tanks to exchange, valves to grind. Just put the machine on charge after every shift.

All steel construction built to last even in the toughest applications. Able to withstand years of abuse.

Time is money and none gets wasted with our sweepers. Monthly labor savings reach thousands of dollars when you sweep.

High Performance motors provides an unmatched standard of cleaning.
